

HOW TO PLAN FOR YOUR BATHROOM RENOVATION

Properly planning to renovate your bathroom is very important. It's not usually a big space, but it has many details & services that have to be carefully considered. Follow our tips below to get started now! Reach out if you need any help.

YOU WILL NEED; Kitchen Layout Sheet, Pencil & Tape Measure.

TIP 1. *Make a rough drawing of the shape of the room as a floor plan. Represent each wall, door, window and any other protrusions. Note the measurement of your vanity & tub.*

TIP 2. *Starting from a corner of the room, measure the overall length of each wall in your bathroom & start a sketch on the bathroom layout sheet.*

TIP 3. *Locate where your electrical outlets & water lines are as well as any heating & ventilation registers.*

TIP 4. *Pick a fixture as a focal point to design your bathroom around. A vanity, tub or a feature in your bathroom will help you design the rest of the space. Check Pinterest for inspiration!*

TIP 5. *Choose the right lighting for your new bathroom. Make sure there will be enough light to properly illuminate your bathroom.*

TIP 6. *Make sure you think about storage in your bathroom and allow for it. Towels, toiletries & cleaning supply storage all should be considered.*

TIP 7. *Pick a water resistant flooring. Tile & vinyl plank flooring are excellent choices.*

TIP 8. *Ventilation is usually an after thought. Make sure you have enough air changes per hour for your new bathroom space to keep mould & mildew at bay*
